CSS Justify & Align Cheatsheet

Flexbox horizontal alignment

`justify-content` aligns items along the main axis (horizontal if `flex-direction` is `row`).

`justify-content: flex-start`

`justify-content: flex-end`

`justify-content: center`

`justify-content: space-between`

```
justify-content: space-around
```

```
justify-content: space-evenly
```

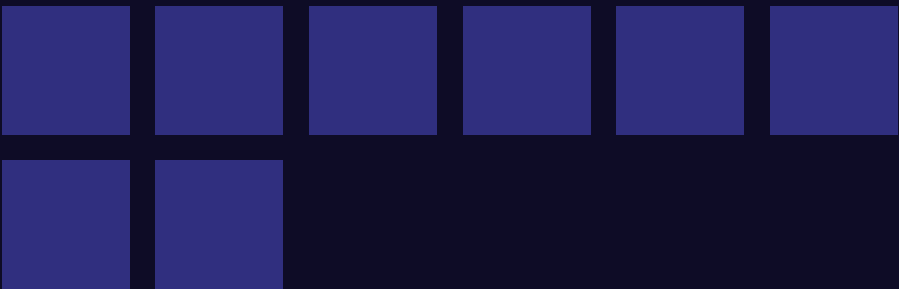

`justify-items` and `justify-self` properties are not used in a flex layout.

Flexbox vertical alignment

When there are multiple lines in the flex container, `align-content` aligns the lines on the cross axis (vertical if `flex-direction` is `row`).

```
align-content: flex-start
```

.....

`align-content: flex-end`

`align-content: center`

`align-content: space-between`

`align-content: space-around`

```
align-content: space-evenly
```

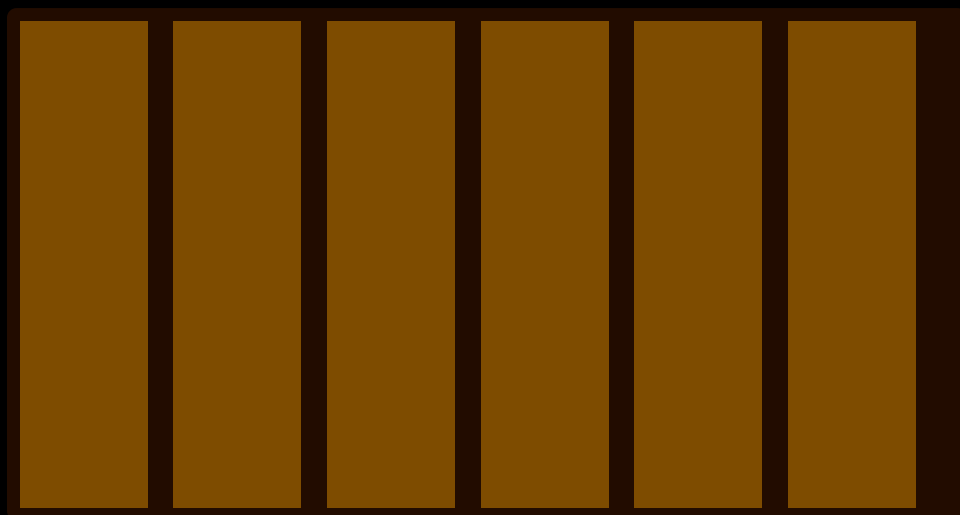

```
align-content: stretch
```

 (rows stretch to fill available space)

`align-items` aligns items along the cross axis, inside their respective cell.

`align-items: stretch` (default)

`align-items: flex-start`

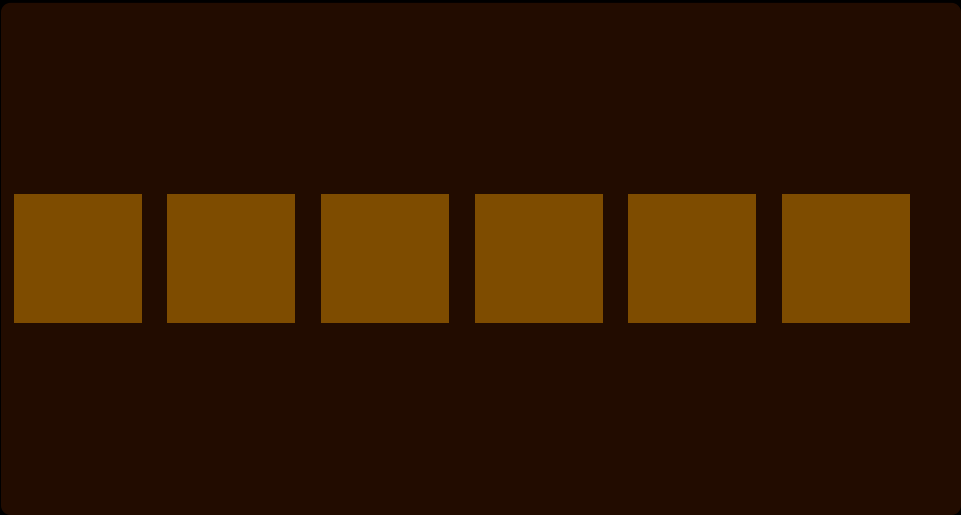

.....

`align-items: flex-end`

`align-items: center`

.....

align-items: baseline

Grid: horizontal alignment

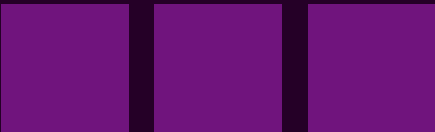

`justify-content` aligns the entire grid horizontally when there is extra space. For example:

css

```
1 .container {  
2   width: 100px; /* Container is 100px */  
3   display: grid;  
4   grid-template-columns: repeat(3, 20px); /* Grid is 60px */  
5 }
```

`justify-content: start`

`justify-content: end`

`justify-content: center`

```
justify-content: space-between
```

```
justify-content: space-around
```

```
justify-content: space-evenly
```

```
justify-content: stretch
```

`justify-items` controls horizontal alignment of grid items inside their grid cells.

`justify-items: start`

`justify-items: end`

`justify-items: center`

`justify-items: stretch` (default)

Grid: vertical alignment

`align-content` aligns the grid vertically when there is extra space. For example,

CSS

```
1 .container {  
2   height: 100px; /* Container is 100px */  
3   display: grid;  
4   grid-template-columns: repeat(3, 1fr);  
5 }  
6  
7 .item {  
8   height: 20px; /* Two rows are 40px high */  
9 }
```

`align-content: start`

.....

align-content: end

align-content: center

`align-content: space-between`

`align-content: space-around`

```
align-content: space-evenly
```

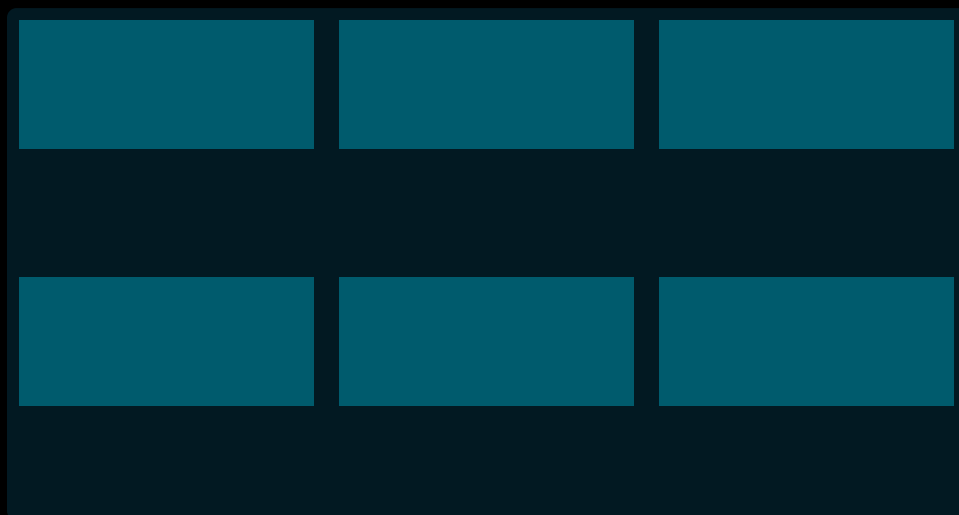

`align-content: stretch` (rows stretch to fill available space, item itself may not if you have set a height)

`align-items` controls the vertical alignment of grid items inside their grid cell.

```
align-items: start
```

```
align-items: end
```

`align-items: center`

`align-items: stretch`

```
align-items: baseline
```
